PERIOD OF PERFORMANCE 07/01/2023-06/30/2024				

*NOTE 1: Effective 01/01/2021:

In accordance with the HPE V8.4 published roadmap, VSI will only be able to offer V8.4 standard support through December 31, 2020. Beginning 01/01/2021, the customer is receiving L1 / L2 "Best Effort" support from the VSI Support team. VSI L1-L2 "Best Effort" Support does not include access to VSI Patch kits, VSI Software Updates or Rights to Minor Versions . If you have any questions, please speak to your VSI Sales Manager.

- a. VSI will provide Level 1 ("L1") Support to a Customer-initiated request for support. L1 Support includes, but may not be limited to the verification and validation that the Customer is entitled to receive Services, the logging of suspected Problems with the Product reported by the Customer, recording the details of the Problem in a Problem-management database, dispatching the request for support as specified herein.
- b. VSI will provide Level 2 ("L2") Support services in response to a Customer's notification of a suspected Problem in the Product. These services include, but may not be limited to, answering Product installation, configuration and usage questions, Problem isolation and identification, determination of whether a solution is contained in Product Information and a review of a symptoms-solutions database for known Problem Resolutions. Depending on the outcome of prior analysis, services may also include an in-depth analysis of the suspected Problem, attempt to recreate the Problem and to provide an acceptable Problem Resolution.
- c. Level 3 ("L3") Support is not included for HPE OpenVMS V8.4 (as of 01-01-2021), which means VSI cannot fix problems in the Product that are determined to be, or are highly probable to be, the result of a design or manufacturing defect or the result of a complex interaction between the Product and another product that cannot be resolved by L2 support, and which requires product design engineering knowledge or expertise to isolate and effect a Problem Resolution. This means software bugs are not fixed, patch kits are not generated or released and there are no rights to new versions granted.
